Education

Singapore Management University

Aug. 2023 – Aug 2027

Bachelor of Science (Information Systems; Business Analytics) and Bachelor of Business Management (Operations),

Double Degree Programme

cGPA: 3.38/4.0

Relevant Coursework

- Enterprise Solution Development
- Big data architecture
- Data Management

Technical Skills

Languages & Databases: Python (Pandas, NumPy), SQL (PostgreSQL, MySQL), JavaScript (Node.js), R

Data Engineering: ETL Pipeline Development, Web Scraping, RAG Architectures, Geospatial Analysis

Cloud & Tools: AWS, Azure, Git/GitHub, Docker, Jira, Confluence, Tableau/PowerBI (Visualization)

Experience

PT Genesis Indojaya

May 2025 – Aug 2025

Business Analyst Intern

Jakarta, Indonesia

- Drove a strategic analysis for a laundry centralisation investment, synthesising competitive dynamics, operational workflows, and feasibility insight
- Designed and implemented GIS-based competitor mapping and service coverage analysis using Python (Folium), identifying optimal hub and plant locations
- Conceptualised and modelled a geospatial plant and hub placement strategy, nearly doubling service area (482.2 km² → 846.9 km²) and increasing coverage (69.9% → 81.44%)
- Delivered executive-ready recommendations on rollout sequencing, SLA design, and logistics incentives to support investment decision-making

HTX Q Team

Dec 2024 – Jan 2025

Software Engineering Intern

Singapore

- Engineered data pipelines from public sources, developing scraping scripts for data collection, enabling model training
- Developed a microservice using Javascript and Node backend to be used by other key functions and projects
- Benchmarked and optimised methodologies to optimize data engineering pipeline and reduce latency
- Seamlessly integrated the project with existing HTX systems and transitioned it to the Q team for production

Honors & Achievements

Hack for Cities

Jan 2025

Finalist

Singapore

- Developed a generative AI-based audio tour guide web application, enabling users to enjoy self-guided audio tours
- Implemented a RAG pipeline using Weaviate cloud for information retrieval by an OpenAI agent to return local facts
- Pitched to a panelist of judges from IBM and IMDA on the potential for a novel avenue of tourism
- Overcame challenges integrating real-time data and optimizing AI response accuracy through testing and feedback loops

HackSingapore 2024

May 2024

2nd Place, Social Responsibility Track

Singapore

- Collaborated in a team of 3 to build a prototype of a skill-based match making volunteering solution in 24 hours
- Developed skills profiling logic for volunteers with LinkedIn API and python
- Presented to panelists from DBS and various tech start ups, achieving 2nd place through our unique value proposition and innovation

Projects & Extracurricular

Americanomics in South Korea

Oct 2025 – Present

Academic Research

South Korea

- Built a large-scale geospatial dataset of Americano prices by scraping 10,000 location-based listings from Naver Maps
- Conducted regional inequality and economic analysis using R, combining spatial visualisation with statistical measures (e.g. Gini coefficient)
- Translated geospatial and economic data into clear visual insights on regional pricing and cost-of-living patterns
